DEDHAM-WESTWOOD WATER DISTRICT
Water Service Line Inventory Project
to Identify Your Property's Service Line Material

September 2023

Dear Customer,

The Dedham-Westwood Water District is required by the United States Environmental Protection Agency (EPA) and Massachusetts Department of Environmental Protection (MassDEP) to develop a Water Service Line Inventory with a focus on identifying lead services by October 2024.

The District's water system comprises over 13,000 service line connections and 210 miles of water main. By conducting this inventory, the District will be able to proactively plan how to address lead in our system and create a removal plan.

In order to complete this project successfully, **WE NEED YOUR ASSISTANCE!** Please review and complete the two steps below:

Step 1: Learn How to Find and Identify Your Water Service Line

Scan the first QR code on the front to help you determine where your water service line is located and what your water service line is made of. You may have to perform a "scratch test" in order to determine your service line material.

Step 2: Complete the District's Water Service Line Inventory Form

Scan the second QR code on the front and complete the inventory form. You will need to upload a photo of your service line to this form.

Questions or assistance can be directed to 781-329-7090 or <https://h2o.dwwd.org/wslp>. Thank you for your assistance in helping make this project a success!

Sincerely,

A handwritten signature in blue ink, appearing to read "BLAKE LUKIS".
